SUMMARY

Software engineer seeking a team where reliable, secure code and ownership of features matter. Brings strong debugging instincts, full stack range from React and Next.js to Python APIs and SQL, and a security first mindset from a secure software development degree and a database security internship. Has shipped a full product independently and gets productive fast in unfamiliar codebases, ready to contribute early and keep growing with the team.

SKILLS

- Languages: Python, TypeScript/JavaScript, SQL, C++
- Web: React, Next.js, Tailwind CSS
- Backend & APIs: FastAPI, REST API design, schema design, bcrypt auth
- Databases: SQL / relational databases (SQLAlchemy, Actian Zen/PSQL)
- Security: OWASP Top 10, secure coding practices, vulnerability research (Semgrep)
- Tools: Git/GitHub, Vercel, Railway, Claude Code, GitHub Copilot (daily, human reviewed)
- Learning: Java/Spring Boot, Node.js, Go, Docker/Kubernetes

EXPERIENCE

Software Engineer Intern, *Gold Star Software* *Hybrid | Aug 2026 - Present*

- Restored a legacy Python toolkit by fixing a broken struct.pack call and replacing deprecated modules, so every script runs on current Python.
- Corrected a data corruption bug in a SQL parsing tool by tracing it to a byte level error, resulting in accurate ConnectionID values.
- Built duplicate query detection by counting repeated queries, flagging any query seen more than 10 times to surface data quality issues.
- Extended a network protocol parser by adding a request/reply tracker and error handling, so files without network data now return a clear error.
- Updated 32 C++ Btrieve utilities by applying supervisor specified changes file by file.

Frontend Engineer, *Skinstric AI* *Remote | Aug 2025 - Sep 2025*

- Developed a real time image analysis app by connecting React to live camera input and REST APIs, returning feature detection results in under one second.
- Launched and monitored the app by debugging state and navigation issues, reducing user facing errors for test users.

Frontend Developer, *Frontend Simplified* *Remote | Jul 2025 - Aug 2025*

- Implemented most of an NFT marketplace app by building multi page React features on a starter template, delivering a working deployed app.
- Managed external API data through asynchronous fetching and state management, so pages handle loading states and edge cases reliably.

FEATURED PROJECT

RelocateReady *relocate-ready.vercel.app*

- Designed a full stack relocation matching app by building a FastAPI backend with a SQLAlchemy schema and a weighted scoring algorithm across 4 user set criteria, returning personalized city matches.
- Secured user accounts using bcrypt password hashing and authentication endpoints, protecting stored credentials.
- Deployed the Next.js and TypeScript frontend on Vercel and the backend on Railway, owning the integration end to end.

EDUCATION

B.S., Secure Software Development, *Red Rocks Community College* *Dec 2026 (Expected)*

Relevant coursework: Secure Code Vulnerabilities, Security Libraries in Programming Languages, Secure Software Engineering, Database Design and Development, Computer Architecture and Assembly Language
